Medicaid Services (CMS)

Transmittal B-03-013

Date: FEBRUARY 7, 2003

CHANGE REQUEST 2524

SUBJECT: Continuation of April 2003 Change Request 2424: Create Import/Export Functionality Between the Unique Provider Identification Number System (UPIN) and the Provider Enrollment Chain Ownership System (PECOS)

The following table lists the Change Requests (CRs) that make up the entire PECOS/MCS/VMS/PES/PENS CR Package for the July 2003 Release: (Highlighted row indicates the current CR.)

CR #	Change Request Description
2524	Continuation of April 2003 CR 2424: Create import/export functionality between the UPIN system and PECOS.
2525	Continuation of April 2003 CR 2425: Create import/export functionality between the Medicare Claims System (MCS) and PECOS.
2526	Continuation of April 2003 CR 2426: Process all Medicare Part B provider enrollments in PECOS. Modify MCS to incorporate all claim payment and provider correspondence functionality that is included in the carrier Provider Enrollment System (PES) but will not be a part of PECOS.
2527	Continuation of April 2003 CR 2427: Process all Medicare Part B provider enrollments in PECOS. Create import/export functionality between Viable Medicare System (VMS) and PECOS.

I. GENERAL INFORMATION

A. Background: PECOS Release 3 is scheduled to go live for carrier use in October, 1 2003. With this release, all Medicare carriers must enter all provider/supplier enrollment data into PECOS. Carrier provider/supplier enrollment data will no longer be entered into PES or PENS. All functions associated with provider enrollment will be handled by PECOS. PECOS will assume the responsibility for communicating with UPIN to obtain the providers' UPIN number and will work with the system maintainers of UPIN to develop import/export functions. PECOS will also assume the responsibility of communicating provider data to MCS and VMS and will work with the MCS and VMS system maintainers to develop the necessary export/import functions. This CR contains the requirements and design considerations that must be coded, tested and implemented for the October 2003 release.

B. Policy: Collection and retention of Form CMS 855 enrollment data has been cleared through a Paperwork Reduction Act Notice in the **Federal Register**. The authority for the various types of data to be collected is found in multiple sections of the Social Security Act and Code of Federal Regulations. Specifically in Sections 1816, 1819, 1833, 1834, 1842, 1861, 1866 and 1891 of the Act and 42 CFR subchapter E.

II. BUSINESS REQUIREMENTS

Requirement #	Requirements	Responsibility
1	UPIN must accept an extract file containing provider data from PECOS.	UPIN Maintainer - National Heritage Insurance Co. in California
2	UPIN must send a file containing UPINs to PECOS.	UPIN Maintainer - National Heritage Insurance Co. in California

III.SUPPORTING INFORMATION AND POSSIBLE DESIGN CONSIDERATIONS

A. Other Instructions:

X-Ref Requirement #	Instructions
1	Format for PECOS extract to UPIN needs to be created according to the MCM standards.
2	Format for UPIN extract to PECOS needs to be created according to MCM standards.

B. Design Considerations:

X-Ref Requirement #	Recommendation for Medicare System Requirements
1	When UPIN receives an extract file from PECOS, UPIN should create a file/report that confirms that the extract file was processed correctly.
2	When PECOS receives an extract file from UPIN, PECOS should update it's provider records with the UPIN Registry data.

C. Interfaces:

PECOS will interface with the UPIN system. UPIN will enumerate the provider and send back the Unique Provider Identification Number to the PECOS system. PECOS will store the UPIN number.

D. Contractor Financial Reporting /Workload Impact:

There will be no affect on providers or contractors.

E. Dependencies:

F. Testing Considerations:

- Testing should validate that UPIN and PECOS can create and process extract files from each other.

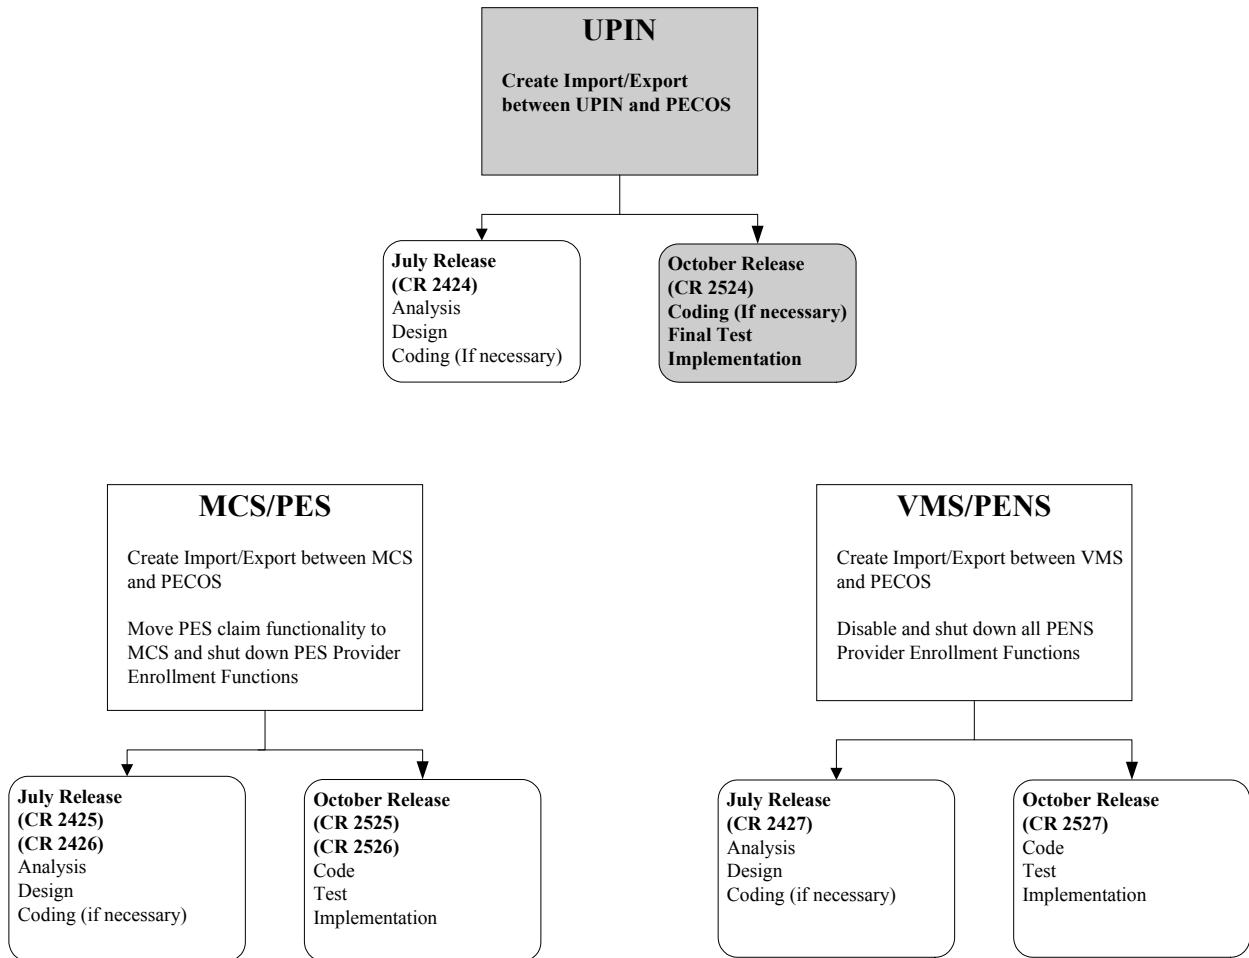

- PECOS should export data to a UPIN test region and validate that the data was exported to UPIN successfully
- UPIN should export data to a PECOS test region and validate that the data was exported to PECOS successfully
