Supported by  
Cure Autism Now (CAN)

This is a listening session regarding the Centers for Disease Control and Prevention's (CDC) portion of the Interagency Autism Coordinating Committee autism research agenda.

(Over)

## WE WANT TO LISTEN TO YOUR INPUT ON AUTISM RESEARCH

A 10-year research agenda has been created by the Interagency Autism Coordinating Committee (IACC), a group of government agencies and parents directed by Congress to coordinate autism activities throughout the federal government. More information about the IACC is available at [www.nimh.nih.gov/autismiacc](http://www.nimh.nih.gov/autismiacc). CDC invites you to join us for a listening session and provide feedback on the portion of that agenda that deals specifically with the autism activities of CDC, which include

- Monitoring the prevalence of autism to determine trends over time and identify those groups at higher risk.
- Conducting public health research on potential causes and other issues, including investigations into potential environmental and chemical influences.
- Educating the public about the importance of early screening and intervention for children with autism.

We look forward to meeting you and getting your input on research and other activities in this important area. CDC invites you to send comments to [autismresearch@cdc.gov](mailto:autismresearch@cdc.gov)
