How They Work

Contract Scope

There is a broad range of high quality, Information Technology, non-complex integration services under SIC code 7373. This can range from simple connection of personal computers to peripherals, through construction of Local Area Networks, up through installation of Wide Area Networks. There is a vast range of related services that can also be provided including, but not limited to, analysis, documentation, and training.

The contractors can accomplish anything from partial installations to turnkey installations, including ongoing operations, using Commercial Off the Shelf hardware/software and their labor. Contractors can also provide repair and maintenance services.

Labor Categories

Labor categories specifically included in the contract include:

Program Manager

Computer Systems Analyst III

Computer Systems Analyst II

Computer Systems Programmer III

Computer Systems Programmer II

LAN Technician

Technician

Pricing information for the labor categories of the various contractors will be posted at our web site, these labor rates are maximum fully loaded rates, and are negotiable. Other labor categories can be added as open market items as needed on an individual basis.

Should a high demand develop for a particular labor category not now included, the possibility exists that it could be added to the contracts. Additionally, Commercial Off The Shelf (COTS) hardware and software can be purchased through this contract vehicle. Since these items were neither listed nor priced in the contract, they would be handled as open market line items on a purchase, requiring some means of determining price reasonableness, such as market surveys.
