16. Abstract

Differences in drinking and driving attitudes and behaviors among diverse groups of persons, (i.e., White, Black, Asian, American Indian/Eskimo and Hispanic), were examined by pooling data from the 1993, 1995, and 1997 administrations of the NHTSA's National Survey on Drinking and Driving Attitudes and Behavior. The special analysis is based on responses from 10,453 persons, age 16 to 64 including 7,955 persons of White, (non-Hispanic) descent, 1,026 of Black (non-Hispanic) descent, 743 Hispanics, 274 Asians, and 197 persons of American Indian or Eskimo descent.

This report, Volume II: *Methods Report* describes the methods used to conduct the interviews and analyze the data. It also contains a copy of the most recent questionnaire. Volume I: *Findings* reports respondent's behaviors and attitudes on the frequency of drinking and driving, general attitudes regarding the problem, enforcement, legal limits, prevention, and crash and injury experience.

The findings show that self-reported prevalence of driving within two hours of drinking in the past year is at 28% for Whites, 21% for America Indian/Eskimo, 17% for Hispanic, 16% for Blacks, and 13% for Asians. While Whites as a group are the most likely to drive after drinking, those of Hispanic or American Indian/Eskimo descent are almost twice as likely as others to put themselves at risk by riding with a potentially impaired driver. Hispanics and American Indians/Eskimos are also more likely than other groups to meet the criteria of being a "problem drinker."

Of the general driving age public, 98% see drinking and driving as a threat to their personal safety, and 86% feel it is very important to do something to reduce the problem. Whites, however, are least likely to see a problem or feel something should be done about it. American Indians/Eskimos are twice as likely as others to report being stopped for suspicion of drinking and driving, and Hispanics are most likely to report arrests from drinking and driving violations. Those of American Indian/Eskimo or Hispanic descent are less likely than others to feel that following a drinking-driving charge, punishment is a certainty.

A majority of those who are aware of BAC levels (56%) support a legal limit of .08 or lower for their state, with the weakest support for an .08 limit occurring among White persons of driving age.

Methods

In order for tracking survey of this nature to be accurate it must be statistically valid in its own right, and the multiple years of data collection must be compatible. This section describes the aspects of the method that relate to these requirements:

- Sample design and sample frame construction (respondent universe and sampling methods)

- Data collection

- Sample execution

- Sample weighting, and

- Sampling tolerances

The sample design and execution of the 1993, 1995 and 1997 survey administrations closely followed the same methodological procedures to ensure compatibility

The respondent universe theoretically consists of all persons of driving age (age 16 or older as of their last birthday). However, since this survey, as well as the three earlier executions, was administered by telephone, the sampling universe is in truth persons age 16 or older living in non-institutionalized dwellings with working telephones (approximately 200 million according to the U.S. Census Bureau estimates). Furthermore, since interviews were conducted only in English and Spanish, any person who does not speak one of these two languages was excluded from this study. The study sample was selected from all telephone households in the United States, including Alaska and Hawaii, and included both drivers and non-drivers.

Statistical Sampling Methods

This study employed a multi-stage sampling procedure to achieve a random, representative sample of the driving public age 16 or older. The design employed was a stratified Random-Digit-Dial (RDD) sample design, which resulted in a sample that was consistent with earlier rounds of the study. It was very important to maintain a consistent sampling structure with earlier execution in order for the samples to be comparable across time.

First, the universe of residential telephone listings was identified within each of the geographic U.S. Census regions. A systematic sample of telephone number banks within each region was then drawn. A telephone number bank consists of the blocks of 100 sequential telephone numbers where only the last two digits of the 10-digit telephone number vary. For example, within the area code 202, exchange 366, one bank would be 202-366-12XX. This procedure provides for an equal probability of selection for each working residential telephone number in the U.S. (both listed and unlisted residential telephone households). A random-digit-dial (RDD) procedure was used to generate the last two numbers for a full ten-digit phone number within each selected 100-number bank

The second stage of selection occurred at the household level. Once a telephone number had been selected for inclusion, one person age 16 or older living in that household was randomly selected to participate. The household-level selection was made using the most recent birthday method, which represents a true random selection of household members, and is considered much

less intrusive than the purely random selection method or grid selection that require enumeration of all household member in order to make a respondent selection. Once a person was selected for inclusion in the study, that person could not be replaced by another person in the household. If the selected person refused to participate, refusal conversion attempts were made to obtain the responses from the selected person. If refusal conversion attempts failed, the entire household was substituted to maintain the representativeness of the sample.

Data Collection

Telephone interviews were completed with persons age 16 or older living in the United States during each execution of the study. Interviewing took place generally over a two- to three-month period in the Fall of the study year (1993, 1995 and 1997). Some interviews in each wave were completed in Spanish using a Spanish-language version of the questionnaire.

All sample management, interview scheduling, conducting and monitoring of interviews, and progress reporting of data collection was handled by Gallup's state-of-the-art computer assisted telephone interviewing (CATI) system. A comprehensive data collection plan was maintained to ensure that high response rates, high data quality and low respondent burden were achieved. The plan involved a call design scheme to optimize telephone coverage and contact with respondents, and to minimize no contacts and refusals. Gallup's internal interviewer recruitment, training and monitoring procedures are also designed to support these aims for this and all studies conducted by Gallup.

The CATI programming process included identification of data locations, keying in question text, responses and corresponding codes, as well as acceptable response ranges, consistency checks, interviewer instructions, skip patterns, and help screens. Two kinds of range and consistency checks were programmed: hard and soft checks. Responses initially entered by interviewers that were outside the hard range were not accepted by CATI. These required the interviewer to clarify with the respondent their initial response (e.g., if the question asked how many days of the past 30 they consumed alcohol, a response of 31 would not be accepted by the CATI system). Soft range checks prompt the interviewer to verify the response. The questionnaire design and layout pass through a strict internal hard copy "proofing review" before it reaching the programming stage. The CATI program was once again proofed before interviewing began. Separate questionnaires were programmed in both English- and Spanish-language.

Sample weighting

Weighting occurred in multiple stages in each study wave and was designed to equalize selection probabilities at both the household and individual levels as well as adjust for non-response bias by demographics. Each step was made using data weighted from the previous step.

All data was post-stratify weighted to correct for the imposed disproportional sample and to adjust for any disproportionality by age, gender, and race due to selecting just one person within a household (clustering effect) and unequal participation rates. The weighting was conducted in a three-stage procedure. In the first stage weighting, Gallup adjusted for the unequal probability of selection for households. In the RDD procedure, households with more than one telephone line had a higher probability of selection in our sample. This disproportionality was corrected by applying an inverse weight to each respondent based on the number of residential telephone lines in his/her household.

The second stage weighting adjusted for any unequal probability of selection within a household. While the study is based on the total non-institutionalized residential population of the U.S., the actual sample units are households. Persons living in households with only one person of driving age have a higher probability of selection than those in households with several eligible persons.

In the second stage weight, Gallup applied a weight to each respondent in the inverse to the number of persons of driving age in the household.

The third stage weight corrected for any unintentional disproportionality due to unequal participation rates among respondents by key demographic characteristics. At this stage, Gallup weighted the actual respondent database (weighted in the first two stages) to match the known demographic characteristics of the U.S. population by age, race, and gender based on the most recent Census Population Projections. This demographic weighting is done in several stages.

The proportion of Hispanics/non-Hispanics were first adjusted to reflect the most recent Census Bureau estimates by census region. White/nonwhite distributions were then reviewed by census region and adjusted if necessary. The data were then examined and the distribution of gender by age (using three age categories (16-34;35-54;55+) corrected if more than +/- 3% variation from the population projections by census region.

Sampling Tolerances

In interpreting survey results, it should be borne in mind that all sample surveys are subject to various types of potential errors. Errors may occur due to non-response (where selected respondents are never reached or refuse to participate), interviewer administration error (where a response can be mis-keyed or misinterpreted by the interviewer), incomplete or inaccurate answers from the respondent or sampling less than the total population, among others.

The sampling design employed in this study was used to produce an unbiased estimate of the stated target population. An unbiased sample will have the same characteristics and behaviors as those of the total population from which it was drawn. In other words, with a properly drawn sample, we can make statements about the target population within a specific range of certainty. Sampling errors can be estimated and their measure used to help interpret the final data results. The size of such sampling errors depends largely on the number of interviews and the complexity of the sampling design.

The confidence interval for sample estimates of population proportions, assuming a simple random sample without replacement is calculated using the following formula:

$$= \quad z \ \sqrt{p \, (q) \, / n\text{-}1}$$

Where:

$p =$ the proportion of the sample that exhibits a particular behavior or characteristic

$n =$ the unweighted sample size

$z =$ the standardized variable for a specific confidence level (for 95% level of confidence z is 1.96)

The sample of telephone households in this study was drawn as a simple random sample within each region. However, the stratification by region and the disproportionate sampling of persons within household introduces a design effect that could possibly suggest that the sample reflect other than a simple random sample.

To test the belief that the resultant sample approximated one of a simple random sample, the sampling errors were calculated under a stratified design and were compared to the sampling errors for the same measures and sample sizes under the assumption of a simple random sample. These sample error comparisons were made for 23 of the key measures in the study. The net

impact over the 23 measures was found to be about a 10% wider band of confidence around the estimates gathered in the study. That is, if an estimate from a study conducted under a pure a simple random sample method had an error range of $\pm$ 1.5. The more precise error range due to the more complex sampling method would be about + 1.6%.

Since the data presented in this report are rounded to whole numbers, the incremental increase in the sampling error range generally did not translate into a wider band around the estimate. Given the relatively small average design effect, the table of expected sampling error ranges based on a simple random sample is a useful approximation of the precision of the sample estimates.

The following tables may be used in estimating the sampling error in any percentage in this report. They may be interpreted as indicating the approximate range (plus or minus the figure shown) within which the results of repeated sampling in the same time period could be expected to vary 95% of the time, assuming the same sampling procedures, the same interviewers, and the same questionnaire.

Table A shows how much allowance should be made for the sampling error around a single percentage estimate in the study.

Table A: Recommended Allowance for Sampling Error of a Percentage
In percentage points (at 95 in 100 confidence level)*

For percentages near:

Sample Sizes Near:	5/95% ±	10/90% ±	20/80% ±	30/70% ±	40/60% ±	50/50% ±
100	4.3	5.9	7.9	9.0	9.7	9.8
200	3.0	4.2	5.6	6.4	6.8	6.9
300	2.5	3.4	4.5	5.2	5.6	5.7
400	2.1	2.9	3.9	4.5	4.8	4.9
500	1.9	2.6	3.5	4.0	4.3	4.4
600	1.7	2.4	3.2	3.7	3.9	4.0
800	1.5	2.1	2.8	3.2	3.4	3.5
1,000	1.4	1.9	2.5	2.8	3.0	3.1
1,500	1.1	1.5	2.0	2.3	2.5	2.5
2,000	.96	1.3	1.8	2.0	2.1	2.2
2,500	.85	1.2	1.6	1.8	2.0	2.0
3,000	.78	1.1	1.4	1.6	1.8	1.8
4,000	.68	.9	1.2	1.4	1.5	1.5

* The chances are 95 in 100 that the sampling error is not larger than the figures shown.

The table would be used in the following manner: Let us say a reported percentage is 30 for a group that includes about 300 respondents. Then we go to the column labeled "Percentages near 30/70%" in the table and go down to the row labeled "300." The number at this point is 5.2, which means that the 27% obtained in the sample is subject to a sampling error or ±5 points. Another way of saying this is that 95 times out of 100 the true figure in the population would be somewhere between 25% and 35%.

In comparing survey results in two samples – for example, Whites and Blacks– the question arises as to how large a difference between them must exist before one can be reasonably sure that it reflects a real difference. In Table B, the number of points, which must be allowed for in such comparisons, is shown.

Here is an example of how the table would be used: Let us say that 53% of Non-Hispanic Whites who drove after drinking in the past year report a particular behavior, while in 47% of Non-Hispanic Black drinker-drivers report the same behavior, for a difference of six percentage points between them. Can we say with any assurance that the six-percentage point difference reflects a real difference between Whites and Blacks? The sample contains approximately 2277 Whites and 160 Blacks. We consult Table B, we look at the column headed 2,000 and the row labeled 200: we see the number 7.2 here. This means that the allowance for error should be 7.2 percentage points. Since the 6% difference found in the data is less than the 7.2% in the table, the six -point difference is inconclusive.

Table B: Recommended Allowance for Sampling Error of the Difference
In percentage points (at 95 in 100 confidence level)*

For percentages near 50%:

Sample Sizes Near:	100	200	300	400	500	600	800	1,000	2,000
100	13.9%	12.0%	11.3%	11.0%	10.7%	10.6%	10.4%	10.3%	10.0%
200	12.0	9.8	9.0	8.5	8.2	8.0	7.7	7.6	7.2
300	11.3	9.0	8.1	7.5	7.2	7.0	6.7	6.5	6.1
400	11.0	8.5	7.5	6.9	6.6	6.3	6.0	5.8	5.4
500	10.7	8.2	7.2	6.6	6.2	5.9	5.6	5.4	4.9
600	10.6	8.0	7.0	6.3	5.9	5.7	5.3	5.1	4.6
800	10.4	7.7	7.7	6.0	6.0	5.6	5.0	4.7	4.1
1,000	10.3	7.6	6.5	5.8	5.4	5.1	4.7	4.4	3.8
2,000	10.0	7.2	6.1	5.4	4.9	4.6	4.3	3.8	3.1

*The changes are 95 in 100 that the sampling error is not larger than the figures shown.

The table provided is for percentages near 50. For percentages higher or lower than 50%, the error to be allowed for is somewhat smaller than those shown in the table.

Hello, this is _____, from The Gallup Poll, calling on behalf of the U.S. Department of Transportation. We are conducting a study of American's opinions about current driving laws. The interview is completely confidential. It only takes about fifteen minutes.

_____ (512)

S1. Including yourself, how many members of this household are age 16 or older? (Open ended **and code actual number)**

    00   None - **(Thank and Terminate)**

    01   One - **(If other than respondent, ask to speak to that person, and Skip to S3)**

    02-
    96   96+   **(Continue)**

    97   Not available - **(Set time to call back)**

    98   (DK)   **(Thank and Terminate)**
    99   (Refused)   **(Thank and Terminate)**

    _____ _____
    (831) (832)

S2. Of those **(response in S1)** adults, I need to speak to the one who had the most recent birthday.

    1   Male respondent available   **(Continue)**
    2   Female respondent available   **(Continue)**

    7   Respondent not available - **(Set time to call back)**

    8   (Refused) - **(Thank and Terminate)**   _____ (833)

S3. **(When respondent is on the line: say)** I need to confirm
     that you are 16 years of age or older. Is that correct?

     1   Yes - **(Continue)**

     2   No   - **(Reset to S1)**

     3   (DK)   **(Thank and Terminate)**
     4   (Refused)   **(Thank and Terminate)**   _____ (834)

S4. Are you a permanent resident at this household at which
     I've reached you, and not a visitor or guest?

     1   Yes, permanent resident - **(Continue)**

     2   No - **(Ask to speak with permanent
          resident, 16 or older, and Reset to "Intro")**

     3   (DK) - **(Ask to speak with permanent
          resident, 16 or older, and Reset to "Intro")**

     4   (Refused) - **(Ask to speak with permanent
          resident, 16 or older, and Reset to "Intro")**   _____ (835)

1.   How often do you usually drive a car or other motor vehicle?
     Would you say that you usually drive **(read 1-5)**?

     1   Every day
     2   Several days a week
     3   Once a week or less
     4   Only certain times a year, OR
     5   Never

     6   (DK)
     7   (Refused)   _____ (514)

(There are no #2 and #3)

4.   The following questions deal with attitudes about drinking
      alcoholic beverages and driving. For each of the following
      statements, please tell me whether you strongly agree,
      somewhat agree, somewhat disagree or strongly disagree.
      (Read and rotate A-E)

      1   Strongly agree
      2   Somewhat agree
      3   Somewhat disagree
      4   Strongly disagree

      5   (DK)
      6   (Refused)

      A.   Most people who drive after drinking too much alcohol
            are alcoholics or problem drinkers:

            _____ _____ (515)

      B.   Drinking and driving by people who are NOT alcoholics
            or problem drinkers is a serious highway safety
            problem:

            _____ _____ (516)

      C.   People should not be allowed to drive if they have been
            drinking any alcohol at all

            _____ _____ (517)

      D.   I feel I should prevent someone I know from driving
            when I see they have had too much to drink:

            _____ _____ (518)

      E.   Scientific evidence has shown that ANY amount of
            alcohol impairs driving:

            _____ _____ (519)

(There are no #5-#14)

(INTERVIEWER READ:)   Now, I'd like to ask you some questions about YOUR OWN behavior.

15.   During the last twelve months, how often did you usually drink any alcoholic beverages, including beer, light beer, wine, wine coolers, or liquor? Would you say you usually drank alcoholic beverages **(read 1-7)**?

     1   Every day
     2   Nearly every day
     3   Three or four days a week
     4   One or two days a week
     5   Two or three days a month
     6   Once a month or less, OR

     7   (Never drank alcoholic beverages
            in last twelve months) –
            (Skip to "Interviewer Read" before #57)

     8   (DK)
     9   (Refused)   _____ (520)

16.   How many days in the past thirty days have you consumed any alcoholic beverages? (Open ended **and code actual number)**

     00   None
     30   Everyday

     DK   (DK) – **(probe for best estimate)**

     RF   (Refused)

                                               _____ _____

_____ (521) (522)

17.   When you drink alcoholic beverages, which ONE of the
       following beverages do you drink MOST OFTEN? Do you usually
       drink **(read and rotate 06-10, then 01)**? **(If respondent says**
       "it varies", ask:) Which would you say you drank the most
       servings of in the past year?

       01   OR, something else (list)
       02   (DK)
       03   (Refused)
       04   HOLD
       05   HOLD

       06   Beer
       07   Light beer
       08   Wine
       09   Wine coolers
       10   Hard liquor or mixed drinks

       _____   (523) (524)

18.   When you drink [**(response in #17)**], about how many [**(if code**
       "06" in #17, say:) 12-ounce regular beers/**(if code "07" in**
       #17, say:) 12-ounce light beers/**(if code "09" in #17, say:)**
       12-ounce wine coolers/**(if code "08" in #17, say:)** five-ounce
       glasses of wine/**(if code "10" in #17, say:)** drinks or shots
       of hard liquor/**(if code "02" or "03" in #17, say:)** drinks] do
       you usually drink per sitting? (Open ended **and code actual**
       number)

       97   Less than one
       98   (DK)
       99   (Refused)

       _____   (525) (526)

(There is no #19)

(INTERVIEWER READ:)　　People often drink different amounts of alcohol depending on the time, place or occasion. On some days they may drink small amounts, on some days they may drink medium amounts, and on other days they may drink large amounts.

(INTERVIEWER: Pause here and SLOW down) Please think about the days when you drank alcohol during a typical four-week period (28 days) at anytime during in the past six months. **(Pause)**

[**NOTE TO INTERVIEWER: One standard drink is approximately 12 ounces (341ml) bottle of beer (9% alcohol), 1 1/2 ounce (43ml) shot of liquor (40% alcohol), 5 ounce (142ml) glass of wine (11% alcohol), 3 ounce (85ml) glass of Sherry, Port or Vermouth (18% alcohol)]**

20.　　On how many of the twenty-eight days in this typical four-week period did you have any alcoholic beverages to drink? (Open ended **and code actual number)**

　　00　　None – **(Skip to "Note" before #26)**

　　28　　Everyday

　　DK　　(DK)　　　　　　**(Skip to "Note" before #26)**
　　RF　　(Refused)　　　**(Skip to "Note" before #26)**

　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　_____　_____

_____　(527) (528)

21. Now, I would like to know how many drinks you had on the days
     that you did drink. First, of those **(response in #20)** days
     that you did drink, on how many days did you have only one or
     two drinks? (Open ended **and code actual number)**

     00   None
     DK   (DK)
     RF   (Refused)

     _____ (529) (530)   _____ _____

                    (If response in #21 EQUALS response in #20,
                              Skip to "Note" at #25;
                                Otherwise, Continue)

22. [Of the **(response in #20 minus response in #21)** remaining
     days,] On how many did you have only three or four drinks?
     (Open ended **and code actual number)**

     00   None
     DK   (DK)

    _____ Resp: (649) (650)

(INTERVIEWER READ:) Now, I'd like to ask you about situations where intervention may have been possible; that is, where someone could have been stopped from drinking and driving.

96. In the last year, how many times were you in a situation where you were with a friend who had too much to drink to drive safely? (Open ended **and code actual number)**

    000 None – **(Skip to "Interviewer Read" before #103)**

    365 Every day

    DK (DK)   **(Skip to "Interviewer Read" before #103)**
    RF (Refused) **(Skip to "Interviewer Read" before #103)**

    _____ _____

    _____ (651 – 653)

(There are no #97 and #98)

99. **(If code "001-365" in #96, ask:)** How many of those **(response in #98)** times did you do something to try to stop them from driving? (Open ended **and code actual number)**

    000 None – **(Skip to "Interviewer Read" before #103)**

    365 Every day

    DK (DK)   **(Skip to "Interviewer Read" before #103)**
    RF (Refused) **(Skip to "Interviewer Read" before #103)**

    _____ _____

    _____ (654 – 656)

100. **(If code "001-365" in #99, ask:)** Think of the MOST RECENT
   TIME you were in this situation. Did you do something to try
   to stop them from driving?

   1   Yes - **(Skip to #102)**

   2   No   - **(Continue)**

   3   (DK)   **(Skip to "Interviewer Read" before #103)**
   4   (Refused)   **(Skip to "Interviewer Read" before #103)**   _____ (657)

101. **(If code "2" in #100, ask:)** Why didn't you do something?
   (Open ended)

   01   Other (list)
   02   (DK)
   03   (Refused)
   04   HOLD
   05   HOLD

                                                                  _____   _____

   _____   (658) (659)

                  **(All in #101, Skip to "Interviewer
                      Read" before #103)**

102. Did they drive anyhow?

   1   Yes
   2   No
   3   (DK)
   4   (Refused)   _____ (660)

(INTERVIEWER READ:)   Now, I'd like to ask you about how
                                 you view the general problem of
                                 drinking and driving.

103. In your opinion, how much is drinking and driving by other
      people a threat to the personal safety of you and your
      family? Would you say drinking and driving by others is
      (read 1-3)?

      1   A major threat
      2   A minor threat, OR
      3   Not a threat

      4   (DK)
      5   (Refused)   _____ (661)

104. How important is it that something be done to reduce drinking
      and driving? Is it **(read 1-3)**?

      1   Very important
      2   Somewhat important, OR
      3   Not important

      4   (DK)
      5   (Refused)   _____ (662)

105. In your community, if a person drinks too much before driving
      (and then drives), which do you think is more likely to
      happen to them - being stopped by the police, or being
      involved in a crash?

      1   Being stopped by police
      2   Being involved in a crash
      3   (Neither)
      4   (Equally likely)
      5   (DK)
      6   (Refused)   _____ (663)

105a.   In your opinion, what percent of drivers who are
          impaired by alcohol (and then drive) will **(read and
          rotate A-B)**? (Open ended **and code actual percent)**

          000   None
          100   100%/All
          DK   (DK)
          RF   (Refused)

          A.   Get stopped by the police:

                                                                   _____   _____
          _____   (664 - 666)

          b.   Have a crash:

                                                                   _____   _____
          _____   (667 - 669)

(INTERVIEWER READ:)   Please tell me how likely each of
                                     the following events are to happen
                                     IF YOU DROVE AFTER HAVING TOO MUCH
                                     TO DRINK.

106.   How likely are you to be stopped by a police officer for
       driving after you have had too much to drink? Is it **(read 1-
       5)**?

       1   Almost certain
       2   Very likely
       3   Somewhat likely
       4   Somewhat unlikely, OR
       5   Very unlikely

       6   (DK)
       7   (Refused)   _____ (670)

(There is no #107)

108. If a police officer stops you and charges you with breaking the drinking and driving laws, how likely are you to receive some form of punishment such as a fine, a suspension of your driver's license, or something more severe? Is that **(read 1-5)**?

        1   Almost certain
        2   Very likely
        3   Somewhat likely
        4   Somewhat unlikely, OR
        5   Very unlikely

        6   (DK)
        7   (Refused)   _____ (671)

109. If you were actually punished for drinking and driving, do you think the punishment would most likely be **(read 1-3)**?

        1   Very severe
        2   Somewhat severe, OR
        3   Not severe

        4   (DK)
        5   (Refused)   _____ (672)

110. What would most likely happen to a driver the FIRST TIME he or she was punished for drunk driving? **(Probe:)** What else? (Open ended and code) **(Probe for three responses)**

             2   B (1/2 sample) - **(Skip to "Note" at #130e)**   _____ (767)

(If code "1" in #130d,
INTERVIEWER READ:) A   person's   BAC   (blood   alcohol   level)   is
                        determined by factors such as gender, body
                        weight, the amount of alcohol consumed and
                        how much food they have recently eaten. An
                        average 170 pound man would have to drink
                        about five drinks in a one-hour period on
                        an empty stomach, to reach a BAC of .08
                        (point oh-eight). He would have to drink
                        about seven drinks in an hour to reach a
                        BAC of .10.

130e.   **(If code "1" in #125a, ask:)** The BAC limit in your
             state is currently .10 (point one-oh). In your opinion,
             should the BAC level in your state be lowered; that is,
             made stricter to a level of .08 (point oh-eight), or
             should it stay as its current level of .10?

             1   Lowered; that is, made stricter
             2   Stay at current level
             3   (DK)
             4   (Refused)
             5   (Raised, or made looser)   _____ (768)

130f.   **(If code "2" in #125a, ask:)** The BAC limit in your state is currently .08 (point oh-eight). In your opinion, should the BAC level in your state be raised; that is, made looser to a level of .10 (point one-oh), or should it stay as its current level of .08?

    1   Raised; that is, made looser
    2   Stay at current level
    3   (DK)
    4   (Refused)
    5   (Lowered; that is, made stricter)   _____ (769)
