<sup>1</sup>Data are shown for Bureau of Economic Analysis (BEA) regions that are constructed to show economically interdependent states. These BEA geographic regions differ from Bureau of the Census geographic divisions shown in some *Health, United States* tables. See Appendix II, Geographic region and division.

<sup>2</sup>The Mideast region includes spending in the District of Columbia (DC), although it is not listed separately. Per capita spending in DC is substantially higher than per capita spending in most states. Most of this higher spending comes from spending on hospital care. One contributing factor to higher spending is the concentration of several higher-cost academic medical centers in a very small geographic area populated with a small number of people. Another factor could be the inability of current data sources and methods to accurately portray spending flows between providers located in DC and beneficiary resident locations. As a result, per capita spending in DC is not shown.

NOTES: Personal health care includes the following types of services: hospital care, physician and other professional services, nursing home care and home health care, drugs and nondurable products, dental services, durable products, and other personal health care not otherwise specified. Per capita expenditures for each category except the last three are shown in tables 141–144. Services not shown separately accounted for 6 percent of personal health care expenditures in 1991 and 10 percent in 1998. Data for additional years are available (see Appendix III). Some numbers have been revised and differ from the previous edition of *Health, United States*.
