

# Income by Gender and Age From Information Returns, 1998

by Peter Sailer, Ellen Yau, and Victor Rehula

For Tax Year 1998, U.S. taxpayers earned a total of \$3.73 trillion in salaries and wages, as reported on Forms W-2 associated with their returns. Of this amount, \$2.42 trillion (or 65 percent) were earned by men. Of the \$497 billion in pensions and annuities received and reported on Forms 1099-R, \$331 billion (66 percent) had male beneficiaries.

If married persons filing joint returns are excluded from the analysis, the incomes of men and women are much closer. Men earned \$688 billion (or 53 percent) of the total \$1.29 trillion in salaries and wages, and received only 61 billion (40 percent) of the total \$153 billion in pensions and annuities.

Of the \$3.73 trillion in salaries reported on Forms W-2 associated with tax returns, \$2.9 trillion (or 78.6 percent) were earned by taxpayers in the "30 under 60" age bracket. This bracket accounted for 58.5 percent of all returns.

These and many other statistics not normally found in the Statistics of Income (SOI) Division's annual report, *Statistics of Income--Individual Income Tax Returns*, can be found in the tables following this article, which are based on combined information from income tax returns and information returns, such as Forms W-2 and 1099. The regular SOI reports are based on tax returns only, and, to the extent that these are joint returns of married couples, represent the combined data for one male and one female. The "tax return unit" is generally considered appropriate for tax analysis purposes. But it may not be adequate for those users who want to analyze the economic activities of individuals.

However, the Internal Revenue Service obtains information returns filed by the payers of income, as well as tax returns filed by recipients of income. And information returns generally identify a single recipient of income [1]. By using the Social Security numbers of the primary and secondary taxpayers on the SOI tax return file, we were able to create a file that showed separate data for husbands and wives for salaries and wages, based on Form W-2; for pensions and

annuities, based on Form 1099-R; and for Social Security benefits, based on Form SSA-1099.

In addition, administrative data from the Social Security Administration allow IRS to classify taxpayers by gender and age [2].

## Comparability of Tax Return and Information Return Data

In the following tables, the data are based on the SOI sample used in the production of the annual report on Individual Income Tax Returns, along with matched information returns from the Information Returns Master File (IRMF) [3]. Tables 1 and 2 show that the data from the two sources, even when they appear to cover the same source of income, are not identical. Some of the differences may be due to reporting problems, either with Social Security numbers (which would prevent a valid match from taking place, or cause a false match) or with duplicate income amounts (multiple filings of the same record, which happen frequently with information returns). While many efforts were made to rid the file of such problems, it is likely that some remain. In addition, there are also legitimate reasons, based on instructions to taxpayers and information return filers, why the two sources are not always equal. For example: **Salaries and wages** (\$3.88 trillion shown on tax returns, \$3.73 trillion on Forms W-2):

In addition to amounts reported in Box 1 of any W-2's that they have been issued, taxpayers are to include on line 7 of the income tax return any of the following:

- fees or honoraria not covered by a W-2;
- tip income not reported to the employer;
- wages received as a household employee not covered by a W-2;
- dependent care benefits from Box 10 of Form W-2, less any excludable portion;
- employer-provided adoption care expenses, less any excludable portion;
- that portion of scholarship and fellowship grants not used for tuition in a program leading to a degree;

*Peter Sailer is the Chief of the Individual Special Projects Section. Ellen Yau is a computer specialist and Victor Rehula is a statistician in that section. This article was prepared under the direction of David P. Paris, Chief, Individual Statistics Branch.*

## Income by Gender and Age From Information Returns, 1998

- all or a portion of deferred income in excess of \$10,000;
- amounts of “non-employee compensation” and “other income” from Form 1099-MISC which the recipient considered to be employee compensation;
- disability pensions shown on Form 1099-R for employees who have not yet reached the minimum retirement age;
- any disbursements shown on Form 1099-R that were actually refunds of excess salary deferrals or excess contributions to a pension plan.

**Gross pension and annuities** (\$442 billion shown on tax returns, \$497 billion on Forms 1099-R): Some amounts shown in Box 1 of Form 1099-R are not carried to line 16a of Form 1040; the first two exclusions are the mirror images of items mentioned under salaries and wages:

- disability pensions shown on Form 1099-R for employees who have not yet reached the minimum retirement age;
- any disbursements shown on Form 1099-R that were actually refunds of excess salary deferrals or excess contributions to a pension plan;
- some disbursements that were rolled over into other pension plans [4].

**Gross Social Security benefits** (\$155 billion shown on tax returns, \$232 billion on Forms SSA-1099): The amount tabulated from Forms SSA-1099 represents gross Social Security benefits less any amounts repaid to SSA by the taxpayer because he or she did not qualify for the benefits. This amount is to be carried by the taxpayer, not to the tax return, but to line 1 of a worksheet in the instructions for Form 1040. This worksheet (not filed with the return) allows the taxpayer to calculate the taxable portion of his or her Social Security benefits. The instructions further state that if the taxable portion is zero (generally true when total income from all sources is less than \$25,000--less than \$32,000 for married couples filing jointly), the taxpayer is to leave the Social Security lines on the tax return blank. If the taxable

amount on line 18 of the worksheet is greater than zero, the taxpayer is to carry the gross amount from line 1 of the worksheet to line 20a of the 1040, and the taxable amount from worksheet line 8 to 1040 line 20b. Nonetheless, over 3 million taxpayers filled in line 20a, even though they had no taxable benefits to report on line 20b. In summary, the \$232 billion shown on Forms SSA-1099 represent the gross Social Security benefits of all filers of U.S. individual income tax returns. The \$155 billion from Forms 1040 represent the gross Social Security earnings of those U.S. taxpayers who had taxable earnings, plus a few more who did not follow the instructions.

### Definitions

Most of the items shown in the tabulations following this article are defined in the report *Statistics of Income--1998, Individual Income Tax Returns*. Differences between certain sources of income taken from information returns and the corresponding tax return items are shown above. Definitions of terms in this article but not in the 1998 Report are given below.

**Earned Income.**--For purposes of this article, earned income was defined as the sum of salaries and wages from Form W-2 (described above) and self-employment income on Schedule SE (described below).

**FICA Tax Withheld.**--This amount is shown on Form W-2 and is withheld in accordance with the Federal Insurance Contributions Act (FICA). This is the Social Security tax paid by employees. The tax withheld is computed on total FICA wages paid. The tax rate for 1998 was 7.65 percent, limited to the first \$68,400 of wages paid each employee during the calendar year. The FICA wages may differ from income tax wages. In some cases, FICA wages may be less than wages for income tax purposes because they may exclude certain fees or honoraria. On the other hand, the FICA wages may be greater because they include certain deferred compensation deducted from income tax salaries under sections 401(k), 408(k), or 408(p) of the Internal Revenue Code. FICA wages may also include other items such as the value of employer-provided meals and lodging, which is excludable from salaries and wages for income tax purposes only.

**Self-Employment Income on Schedule SE.**--This amount represents 92.35 percent of the net gain

## Income by Gender and Age From Information Returns, 1998

from self-employment, reduced by any net loss, as shown on line 4a of Schedule SE. It is possible to distinguish the self-employment income of husbands from that of wives using tax return data only. To the extent that they earn self-employment income subject to social security taxation, each spouse must file his or her own Schedule SE as part of the tax return, in order to compute non-employee Social Security taxes. Income reported on this schedule may appear elsewhere on the tax return on Schedule C (non-farm sole proprietorship income), Schedule F (farm sole proprietorship income), or Schedule E (partnership income). However, not all partnership income may be transferred to Schedule SE, since some of it may not be earned income. Furthermore, if net self-employment income was less than \$400, the taxpayer was generally not required to file Schedule SE.

### Data Sources and Limitations

The statistics in this study were based on a sample of individual income tax returns, Forms 1040, 1040A, 1040EZ, and 1040PC (including electronic returns). Since the data presented in this article are estimates based on this sample, they are subject to sampling as well as non-sampling error. Coefficients of variation, computed from the sample, are used to measure the magnitude of the sampling error. See Table 1.4CV in *Statistics of Income--1998, Individual Income Tax Returns* for coefficients of variation.

For purposes of this article, the tax return records were matched to information return data from the Information Return Master File (IRMF), using Social Security numbers. This matching process may have resulted in non-sampling error. Especially in the case of secondary Social Security numbers, IRS perfection may not have taken place at the time the tax return was selected for the SOI sample. While most false matches to the IRMF were corrected during SOI error resolution, data missing due to false non-matches were generally not restored.

Some of the shortfall of salaries and wages on the W-2 side, when compared to tax return data, is the result of definitional differences, not of errors. Some of the differences can be quantified, or at least approximated, with available data. For example, in the following table, if any shortfall on the W-2's was made up for by amounts shown on Forms 1099-MISC or 1099-R, these amounts are shown on lines 2

and 3, respectively. Dependent care expenses reportable as salaries and wages (line 4) can be obtained from Form 2441 (Child and Dependent Care Expenses). Unreported tip income (line 5) was estimated from the "Social Security and Medicare tax on tip income not reported to the employer" shown on line 52 of Form 1040. Excess deferred compensation (line 6) was computed from the total deferred compensation box on Form W-2.

Figure A

### Tax Returns with More or Less Salaries and Wages Than on Matched W-2's

Item	Number of returns	Amount (\$1,000)
<b>Returns with more salaries and wages:</b>		
Total difference.....	11,568,302	172,808,026
Tax return salaries and wages include:		
Items from Form 1099-MISC.....	1,900,901	8,821,215
Items from Form 1099-R.....	1,478,197	7,914,873
Dependent care expenses.....	206,676	618,788
Unreported tip income.....	245,028	343,320
Excess deferred compensation.....	14,169	47,072
Tax return may contain SSN errors.....	494,910	8,516,020
Other differences.....	9,348,507	146,546,738
<b>Returns with less salaries and wages:</b>		
Total difference.....	6,981,107	21,311,283
Tax return may contain SSN errors.....	194,010	881,113
W-2 may contain SSN errors.....	44,144	62,299
Other differences.....	6,742,954	20,367,871

Failure of the name control obtained from the tax return to match with the name control provided for the given SSN by the Social Security Administration may indicate an SSN error--although in some cases it simply represents the failure of a recently married woman to inform SSA of her name change. Most of the differences on line 7 probably result from match failures due to incorrect SSN reporting. This still leaves \$146.5 billion in differences unaccounted for--attributable to bad SSN reporting on information documents, or to amounts simply not covered by Forms W-2.

Only a small proportion of the underreporting of salaries and wages on Forms 1040 (when compared to Forms W-2) could be attributed to bad SSN reporting on either the tax return or the information document side. This number was low because SOI edi-

## Income by Gender and Age From Information Returns, 1998

tors broke most questionable links between tax and information returns during the processing of the matched file. Some, but not all, of the remaining difference represents underreporting of income on the initial Form 1040. It should be emphasized that all 1040 data in this article represent the original returns filed by taxpayers, before any communications between IRS and the filer, before the filing of any amended returns, and before any audits.

### Notes and References

[1] The statement that information return data are for a single recipient is certainly true for Forms W-2 (salaries and wages), Forms 1099-R (pensions and annuities), and Forms SSA-1099 (Social Security benefits), all of which were used for this article. Some of the other information returns, such as 1099-DIV (dividends) and 1099-INT (interest), while identified by only one SSN each in the IRS files, frequently represent jointly held accounts. They were excluded from the current analysis, because attributing them to one taxpayer would be misleading. Also excluded

were some 24 additional types of information documents accounting for smaller income and deduction amounts of individual taxpayers.

- [2] Whenever a new Social Security number is issued, the Social Security Administration (SSA) obtains data on date of birth and gender. SSA shares this information with the Internal Revenue Service for the purpose of the enforcement of certain age-specific provisions of the tax code, as well as for tax administration research purposes.
- [3] Internal Revenue Service. *Statistics of Income--1998, Individual Income Tax Returns*. Washington, DC, U.S. Government Printing Office, 2001.
- [4] According to the instructions, rollover amounts are to be reported on line 16a (gross pensions) of Form 1040, and then excluded from line 16b (taxable pensions). However, some taxpayers exclude the rollovers from line 16a as well as line 16b. When it is evident that the excluded amounts are rollovers, IRS may make no further adjustment to the 1040.
