# Tips for Raising Safe and Healthy Kids

# Plan a Healthy Pregnancy

Give your child a good start by planning a healthy pregnancy. Women should take folic acid before gettting pregnant and avoid drinking alcohol during pregnancy to prevent several birth defects. Know your family and medical history to determine if you or the baby are at increased risk for certain diseases and conditions.

#### Live a Smoke-Free Life

Being exposed to second-hand smoke is just as unhealthy as smoking directly. Women should be smoke-free during

pregnancy to prevent premature birth and other health problems. Stay smokefree to help

reduce your children's risk for sudden infant death syndrome (SIDS), bronchitis, asthma, and pneumonia.

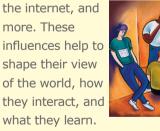

#### Keep Their Check-ups and Immunizations Up-to-Date

Routine exams and screenings help you and your kids prevent, identify, and treat health problems when they arise. Vaccines help prevent infectious diseases and save lives.

# Monitor Their Activities

Kids learn from family, friends, television, music, video games,

Know what they are listening to and watching, how much time they spend with an activity, and if it's appropriate for their age. Ask yourself if there are healthy and fun activities they (and you) can do, and start today.

#### Protect Your Kids

Although kids are small, they are quick, curious, and not aware of dangers. Take steps to make sure your home, vehicle, play areas, day care, schools,

and other environments are safe for your kids. Use car seats

and seat belts. Supervise your kids, and make them aware of hazardous substances and situations.

# Teach Them Healthy Habits

Provide your kids with a good foundation to help them make healthy choices every day. Seat belts, helmets, sunscreen, tooth brushing, and hand washing are just a few of the things that help to keep us all safe and healthy. Make

good health choices a part of your daily life to show them how to do it.

#### Provide Healthy Meals

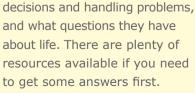

Eating right will help provide the nutrients needed to have energy, build strong bones, and fight diseases and other conditions. Pay attention to what and how much your kids eat. This could help indicate problems of which you may not be aware.

# Talk and Listen to Your Kids

Health starts at home. Talking to your kids may help them better understand how they can be

healthy, safe, and happy. Find out what's going on with them, how they are making

#### Keep Them Active

Regular physical activity in childhood and adolescence improves strength and endurance, helps build healthy bones and muscles, helps control weight, reduces anxiety and stress, increases self esteem, and may improve blood pressure and cholesterol levels.

# Provide Love and Support

Kids need the support and love

of family and friends. Times of stress or emergency may make kids vulnerable to health and psychological

problems. Determine if stress related to school, body changes, thoughts and feelings, family issues, death of loved ones, or changes in general are causing problems. Help your kids make connections and have balance in their lives.
