

APPENDIX D

SUMMARY TABLES: ESTIMATED CAFO FINANCIAL EFFECTS

This appendix shows EPA's estimates of financial effects on operations with more than 300 AU for the two technology options evaluated for this rulemaking. The first option (Option 1) will require land application at the CAFO to be consistent with proper agricultural practices, including limiting manure application to the nitrogen needs of the crops grown. The second option (Option 2) will require land application at the CAFO to be consistent with proper agricultural practices, including limiting manure application to the nitrogen needs of the crops grown or where necessary, to the phosphorus needs of the crops.

Using the approach described in Section 2.4 of this report, EPA conducts its analysis first at the farm level based on data reflecting financial conditions for the entire farm operation (i.e., reflecting income and cost information spanning the entire operations, and thus considering the operation's primary livestock production, along with other income sources such as secondary livestock and crop production, government payments, and other farm-related income). Based on the farm level results, EPA also assesses the financial effects on CAFOs at the enterprise level (e.g., limiting the scope of the assessment to the operation's livestock or poultry enterprise, and excluding other non-CAFO related sources of income from the analysis).

This appendix presents estimated financial effects using the farm level data and model and enterprise level data. Financial effects are estimated for each representative model CAFO and are broken out by animal sector, production region, and facility size, as well as groupings based on land availability and the technology needs of the facility. These groupings include the following:

- **Production region:** Midwest (MW); Central (CE); Pacific (PA); Mid-Atlantic (MA); and South (SO). For more information, see Table 2-1 in Section 2 of this report.
- **Facility size:** Varies by sector. See Table 2-1 in Section 2 of this report.
- **Land availability:** Category 1 CAFOs (sufficient cropland for all manure nutrients generated), Category 2 CAFOs (insufficient cropland), and Category 3 CAFOs (no available cropland for land application).
- **Technology needs:** Medium (average needs); Low (least needs); High (most needs).

Results are presented in terms of EPA impact categories to assess the financial effects of the final regulations: Affordable, Moderate, and Stress. As discussed in Section 2.4, the first category is the affordable category, which means that the regulations have little or no financial impact on CAFO operations. The second category, the moderate impact category, means that the regulations will have some financial impact on operations at the affected CAFOs, but EPA does not consider these operations to be vulnerable to closure as a result of compliance. Table D-1 presents these results. The third category is the financial stress category, which means that EPA considers these operations to be vulnerable to closure post-compliance, subject to other considerations. Table D-2 presents these results at the farm level, then combined with the results at the enterprise level. Section 2.4 of this report describes the decision framework that EPA assumes for this analysis.
