

## **Additional Requirements for Utility Service Trucks; Regular, Extended, and Crew Cab, 4x2 and 4x4**

The truck specified shall be furnished with an open (without roof) utility service body with applicable equipment. The body and cabinetry shall be constructed of corrosion resistant A40 galvaneel minimum, or other specified material such as all fiberglass (code FG), or all aluminum (code AL), each constructed with strength equal to steel. Units other than steel shall generally conform to the dimensional, layout, performance, and design specified herein, with the exception of basic body material used to accomplish the objectives (e.g. safety tread steel plate floor or equal, etc.). The body shall have a center load compartment with cabinets on each side. Service bodies shall be a body manufacturer's commercial model as represented in the manufacturer's current technical data and as required herein. The body shall include, but not be limited to, the body manufacturer's furnished locks, latches, hinges, wiring harnesses, flush mounted lights, all mounting hardware and components. Items normally furnished by the chassis manufacturer, such as but not limited to fuel system fill components, shall be used for integrating the body with the chassis. Body installers shall fully conform to body and chassis manufacturer's instructions and recommendations.

For 56" CA trucks with 8500-12,500 GVWR, only OEM box-off (box delete) chassis and cab shall be furnished.

Rear axles on dual rear wheel vehicles shall be a minimum of 92 inches wide unless otherwise specified (code NAX).

Load compartment floor thickness shall be of not less than 12 gage (2.7 mm (0.1046 in)) galvaneel safety tread steel plate. Bulkhead shall be constructed to a minimum height of 48 cm (19 in) above the load space floor, and shall be not less than 16 gage (1.5 mm (0.0598 in)) galvaneel, reinforced for rigidity. When body is made of aluminum, the minimum strengths shall be furnished and the floor shall be a minimum of 3.2 mm (0.125 in) 5086-H34 and bulkhead shall be a minimum of 2 mm (0.080 in) 5052-H32 aluminum and including reinforcement for rigidity. When a telescoping roof is specified (code UTR) the bulkhead shall be constructed to full height of cabinets. The bulkhead shall be capable of withstanding a horizontal static load equal to 1/2 the payload capacity of the vehicle without permanent distortion. On fiberglass bodies the cab guard shall be steel or aluminum. The guard shall be at least the width of the load space and the height of the cab and include openings for rear visibility.

Tailgate shall be constructed of not less than 16 gage (1.5 mm (0.0598 in)) double paneled or 14 gage (1.9 mm (0.0747 in)) single panel galvaneel, reinforced for rigidity. Tailgate shall be hinged and equipped with supports for retention in horizontal position and when in the horizontal position shall be aligned flush or slightly lower than floor level. Tailgate shall be minimum 23 cm (9 in) high. Aluminum tailgates

shall be double paneled construction from a minimum 2 mm (0.080 in) material or single panel 2.3 mm (0.090), reinforced for rigidity.

Cabinet headers shall be not less than 14 gage (1.9 mm (0.0747 in)) galvaneel. Cabinet backs and partitions shall be of not less than 16 gage (1.5 mm (0.0598 in)) galvaneel steel. Cabinet shelves shall be capable of supporting a minimum of 91 kg (200 lb) each when supported no more than 10 cm (4 in) in from each end of the shelf. Cabinet doors shall be double panel constructed from not less than 20 gage (0.9 mm (0.0359 in)) galvaneel, with reinforcement. Aluminum doors shall be double panel construction from a minimum 1.6 mm (0.063 in), 5052 H32 material. Aluminum and fiberglass body shall have cabinet material and construction of the same material(s) as the rest of the body. Strength of finished cabinets shall be at least equal to that of steel construction. The steel cabinet interior shall be prepared, primed, and painted with a light colored semi-gloss or flat gray finish paint (not a primer finish), except that galvanized coated steel shelves need not be painted.

Cabinet arrangement shall include two vertical cabinets and one horizontal cabinet on each side of the body as follows:

- (A) One full height vertical cabinet with not less than two removable shelves on each side of body front.
- (B) One horizontal cabinet with a minimum of five adjustable partitions to form small bins on the curbside of the body. If a single shelf is used, it shall be full width.
- (C) One horizontal cabinet with not less than one full length tray on the street side of the body.
- (D) A full height vertical cabinet to the rear of the wheel housing on each side of the body with a minimum of one adjustable shelf.

Cabinet doors shall provide access to all portions of each cabinet, and door closures shall be weatherproof incorporating an automotive tubular type neoprene sealing system. Doors shall have full length continuous rod or hem type heavy-duty hinges, with stainless steel hinge pins or stainless steel, bronze, or nylon insert sockets. Latches shall have recessed handles. All doors shall be provided with cylinder type locks, operable from the same key but having various combinations of cylinder locks, as available, between vehicles on multi-unit contracts. Moving parts of latches and locks shall be constructed of, or plated with corrosion-resistant material. All vertical doors shall be furnished with double spring loaded stays to facilitate both hold open and closing, and doors shall not interfere with each other when open.

# TABLES 18, 19 & 20

Horizontal doors shall have two (2) removable pivoting supports to hold open in the 90 degree position and be reinforced so as to permit their use as a shelf. Latches, hinges, and striker plates shall be non-welded, easily replaced, and striker plates shall be readily adjustable. Fiberglass bodies shall be reinforced in the latch and hinge hardware areas.

## Utility Service; Regular, Extended, and Crew Cab, 4x2 and 4x4
