# Federal Share of Academic R\&D Climbed to 60 Percent in FY 1993 

by M. M arge<br>M achen

Federally financed academic R\&D growth rate in FY 1993 outpaced nonfederal growth 5 to 1 after adjusting for inflation.

You can get information quickly
through STIS (Saience and Technology Information System), NSF's online publishing system, described in NSF 94-4, the "STIS flyer." To get a paper copy of the flyer, call the NSF Publications Section at 703-306-1130. For an electronic copy, send an e-mail message to stisfly@nsf.gov (Intemet). For NSF's Telephonic Device for the Deaf capability, dial 703-306-0090.
$\mp$ otal academic expenditures for separately (R\&D) in science and engineering (S\&E) fields climbed to $\$ 19.9$ billion in FY 1993. This amount represents a 6-percent increase from the $\$ 18.8$ billion spent in FY 1992. Adjusted for inflation, the FY 1993 R\&D increase was 3 percent.

Federally financed spending for separately budgeted R\&D at universities and colleges reached $\$ 11.9$ billion in FY 1993, up nearly 8 percent over 1992 levels; nonfederal support reached $\$ 7.9$ billion, up 3 percent above that in the previous year. Adjusted for inflation, Federal dollars rose 5 percent and nonfederal expenditures, less than 1 percent. The 60-percent share of academia's R\&D total provided by the Federal Government in 1993 indicates an upturn after a period of slow decline over the last decade from a 63-percent share in 1983 to a low of 58 percent in 1991.

The fastest growth rates in academic R\&D support since the early 1980s, however, have occurred among nonfederal sponsors. For example, industrial support averaged increases of 10 percent per year since 1983, even after adjusting for inflation, and now accounts for a 7-percent share of academia's 1993 R\&D total. Universities' own funds, the largest nonfederal source, have averaged 7 percent per year real growth. Cost sharing and underrecovery of indirect costs account for over one-half of the university contribution toward research activities. The remainder of institutional funds represents separately budgeted projects financed from discretionary or unrestricted university accounts. In constant dollars, State and local governments and all other sources, including foundations and voluntary health agencies,
each averaged 6-percent growth per year during the 1983-93 period (table 1) .

## SOURCE: National Science Foundation/SRS

Academic spending for basic research activities in 1993 totaled $\$ 13.3$ billion, representing growth of 6 percent ( 3 percent in 1987 dollars) over 1992 levels. The Federal share, $\$ 8.4$ billion, accounted for 63 percent of the basic research total. Expenditures in 1993 for applied research and development combined were approximately $\$ 6.6$ billion, up 6 percent (3 percent in real terms) over the previous year. The relative proportion of total academic R\&D expenditures for basic research has remained relatively stable over the last 18 years-accounting for 65 to 69 percent of the annual academic $R \& D$ totals.

Academic $R \& D$ spending in all major science fields outpaced the 3-percent inflation rate
from 1992 to 1993. R\&D growth ranged from a low of 4 percent in the physical sciences to a high of 19 percent in the "all other sciences" category, which primarily represents multidisciplinary research. Engineering R\&D increased 3 percent, to $\$ 3.2$ billion, in 1993 with mechanical engineering reflecting the largest gain, 6 percent, over 1992. Among all major S\&E fields over the past decade, $\mathrm{R} \& \mathrm{D}$ spending has increased at the most rapid rate in computer sciences ( 12 percent in constant dollars).

R\&D activities are highly concentrated within the academic sector. Separately budgeted academic $R \& D$ spending for the leading 20 research institutions in 1993 totaled $\$ 6.4$ billion, representing 32 percent of total and 35 percent of federally funded $\mathrm{R} \& \mathrm{D}$ spending, respectively (table 2). The 100 largest academic performers expended $\$ 16.0$ billion, accounting for 80 percent of the R\&D total and 83 percent of federally financed expenditures, similar to shares reported during the past decade.
