A large school of yellow tang fish swimming in clear blue water. The fish are densely packed, with many individuals visible in the foreground and background. They have a yellowish-brown body with a prominent yellow stripe running along the side. The water is a deep, clear blue, and the overall scene is a vibrant underwater environment.

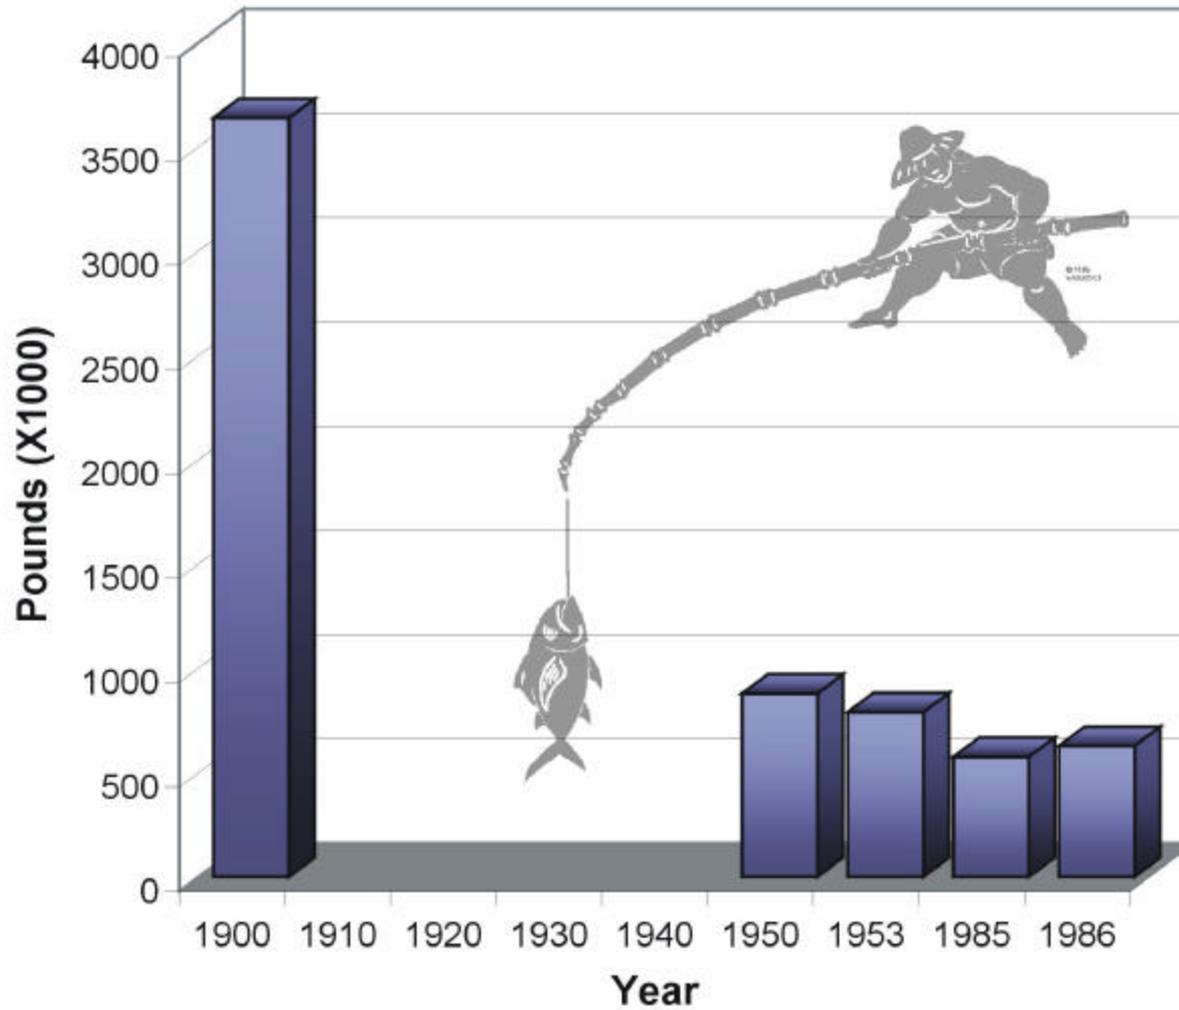

**FISH HABITAT UTILIZATION PATTERNS  
AND EVALUATION OF THE EFFICACY OF  
MARINE PROTECTED AREAS IN HAWAII**

Hawai'i Marine Laboratory Refuge

#### BOUNDARIES:

The Hawai'i Marine Laboratory Refuge consists of the reefs and waters surrounding Moku-o-Ike (Coconut Island) from the high water mark on the island seaward to 25 feet beyond the outer edges of the reefs.

#### PROHIBITED:

Unlawful to take any aquatic life within the refuge.

#### EXCEPTIONS:

Researchers and other agents of the University of Hawai'i may catch or take aquatic life for scientific purposes.

#### PENALTIES:

Maximum \$500 fine and/or 30 days in jail.

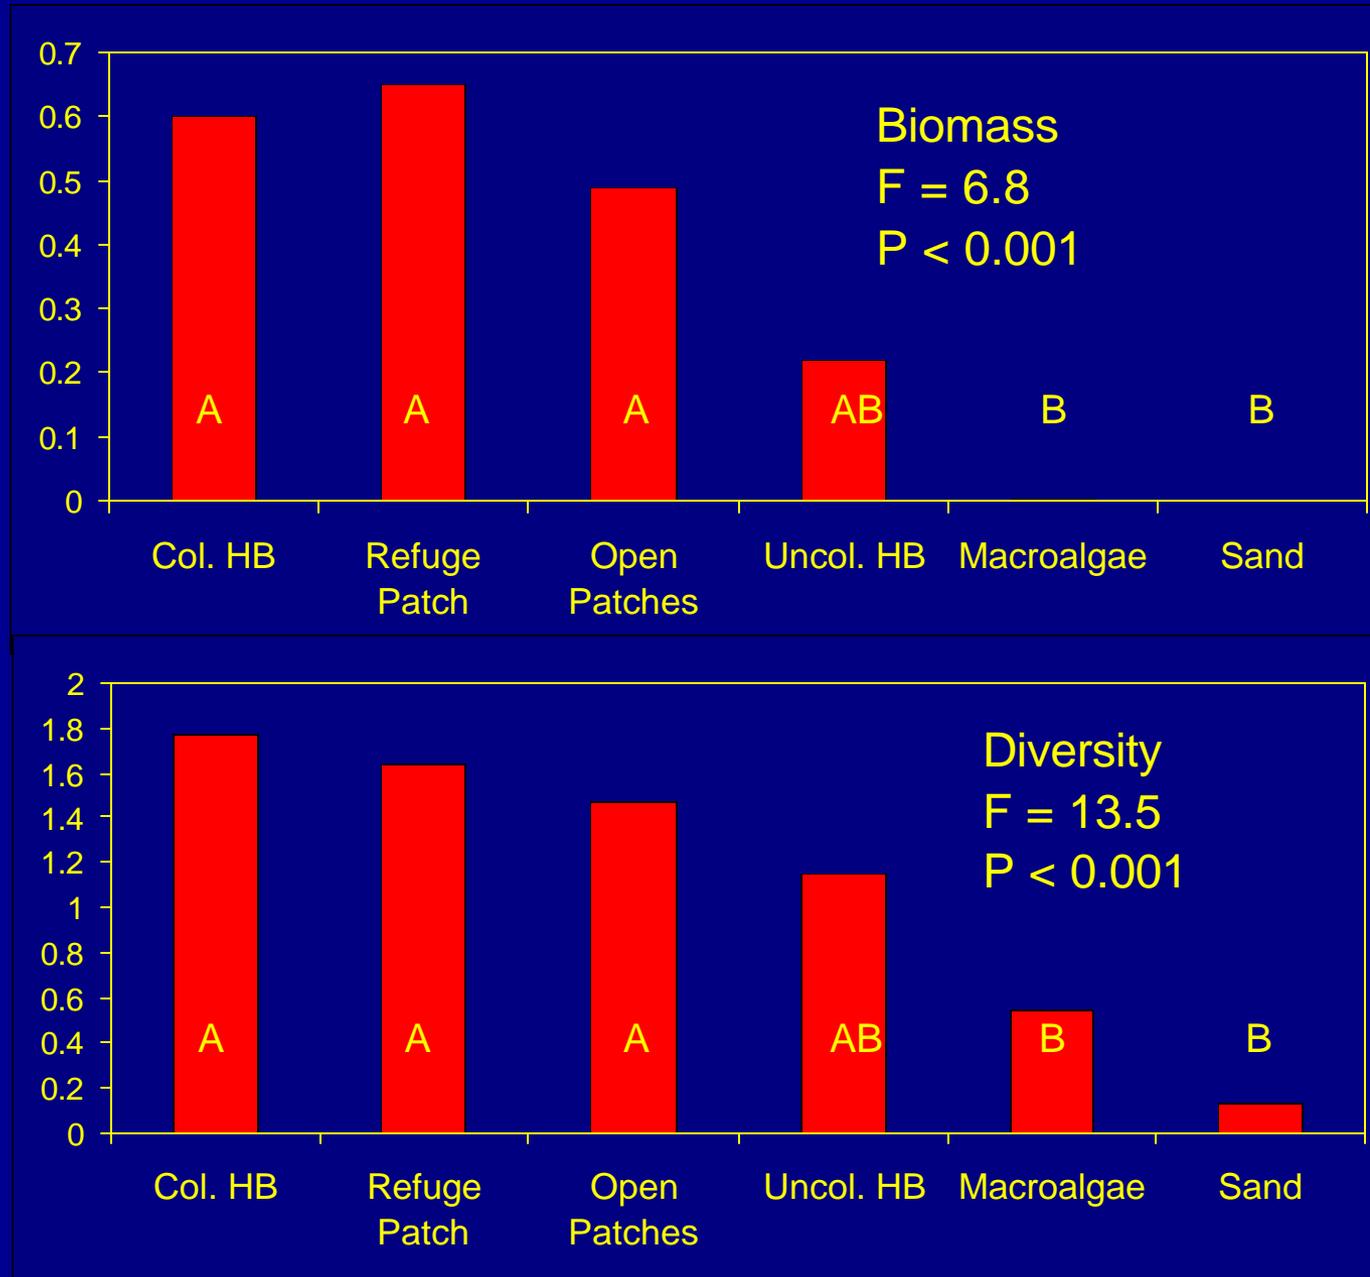

To report violations, call 587-0077.
