## **DISCLAIMER**

**Mention of the name of any company or product does not constitute endorsement by the National Institute for Occupational Safety and Health.**

**DHHS (NIOSH) Publication No. 94-110**

**For public sale by:**

**U.S. Department of Commerce  
Technology Administration  
National Technical Information Service (NTIS)  
5285 Port Royal Road, Springfield, VA 22161**

**Ask for PB94-176930**

**Please call (703) 487-4650 for regular service.  
Please call (800) 553-NTIS for rush service.**

**Price is double for addressees outside of the U.S., Canada, and Mexico.**

**Further ordering information on last page.**

## ACKNOWLEDGEMENTS

We wish to especially acknowledge the efforts of Arun Garg, Ph.D., Professor of Industrial and Systems Engineering, University of Wisconsin-Milwaukee, who served as the chief technical consultant to NIOSH in the preparation of this document. We also wish to acknowledge the technical assistance of M.M. Ayoub, Ph.D., Don B. Chaffin, Ph.D., Jerome Congleton, Ph.D., Jeffrey Fernandez, Ph.D., Colin Drury, Ph.D., Stephan Konz, Ph.D., Suzanne Rodgers, Ph.D., and Roger Stephens, Ph.D.

The comments and reviews provided by other NIOSH personnel are gratefully acknowledged. They include Steven Sauter, Ph.D. and Dan Habes of the Division of Biomedical and Behavioral Science, and Lawrence J. Fine, M.D., M.P.H. of the Division of Surveillance, Hazard Evaluations, and Field Studies. We also wish to extend our appreciation to Mr. Richard Carlson of the Division of Training and Manpower Development for the illustrations contained in this document. We sincerely appreciate the encouragement and support of Dr. Janet C. Haartz, Director, Division of Biomedical and Behavioral Science.

## FOREWORD

This Manual was developed to provide users of the revised NIOSH lifting equation (1991 version) with methods for accurately applying the lifting equation to a variety of lifting tasks. All necessary terms, definitions, and data requirements for the revised equation are provided in Section 1. Procedures for analyzing single-task and multi-task lifting jobs are described in Section 2. A series of ten lifting tasks is included in Section 3 to illustrate application of the procedure. For each task, a brief **job description** is provided, followed by a **job analysis**, and a **hazard assessment**, including a completed worksheet. Suggestions for redesign of the task are also provided.

The rationale and supporting criteria for the development of the revised NIOSH lifting equation are described in a journal article, *Revised NIOSH Equation for the Design and Evaluation of Manual Lifting Tasks*, by T. Waters, V. Putz-Anderson, A. Garg, and L. Fine, *Ergonomics* 1993. [See Appendix I]. The revised equation reflects research findings published subsequent to the publication of the original NIOSH equation (1981) and includes consideration of additional components of lifting tasks such as asymmetrical lifting and quality of hand-container couplings as well as a larger range of work durations and lifting frequencies than did the 1981 equation. It must be noted that application of this equation is limited to those conditions for which it was designed. It does not, for example, address such task factors as one-handed lifting, lifting extremely hot or cold objects, or factors that may increase the risk of a slip or fall and other non-lifting components of job tasks. A complete list of work conditions which are *not* covered by the 1991 equation is presented in Section 1.2 on page 9 of this Manual. Finally, it should be recognized that all methods require validation. Appropriate studies for the validation of this equation must be conducted to determine how effective these procedures are in reducing the morbidity associated with manual materials handling.

The equation was designed to assist in the identification of ergonomic solutions for reducing the physical stresses associated with manual lifting. It is our hope that this Manual (1) will assist occupational safety and health practitioners in evaluating lifting tasks and reducing the incidence of low back injuries in workers, and (2) also serve to stimulate further research and debate on the prevention of low back pain, one of the most costly occupational health problems facing our nation.

Janet C. Haartz, Ph.D.  
Director, Division of  
Biomedical and Behavioral Science

## TABLE OF CONTENTS

ACKNOWLEDGEMENTS .....	iii
LIST of FIGURES .....	viii
LIST of TABLES .....	ix
INTRODUCTION .....	1
<b>1. THE REVISED LIFTING EQUATION .....</b>	<b>4</b>
1.1 Definition of Terms .....	4
1.1.1 Recommended Weight Limit (RWL) ...	4
1.1.2. Lifting Index (LI) .....	4
1.1.2. Terminology and Data Definitions ...	5
1.2. Lifting Task Limitations .....	9
1.3. The Equation and Its Function .....	12
1.3.1. Horizontal Component .....	14
1.3.2. Vertical Component .....	17
1.3.3. Distance Component .....	18
1.3.4. Asymmetry Component .....	19
1.3.5. Frequency Component .....	22
1.3.6. Coupling Component .....	28
1.4. The Lifting Index (LI) .....	33
1.4.1. Using the RWL and LI to Guide Ergonomic Design .....	33
1.4.2. Rationale and Limitations for LI .....	34
1.4.3. Job-Related Intervention Strategy .....	34
<b>2. PROCEDURES FOR ANALYZING LIFTING JOBS .....</b>	<b>36</b>
2.1. Options .....	36
2.1.1. Rationale for Determining Significant Control .....	36
2.1.2. Rationale for Multi-task Analysis Procedure .....	37
2.2. Collect Data (Step 1) .....	40
2.3. Single-Task Assessment (Step 2) .....	43
2.4. Multi-Task Procedure .....	43

2.4.1. Compute the FIRWL for Each Task . . .	44
2.4.2. Compute the STRWL for Each Task . . .	44
2.4.3. Compute the FILI for Each Task . . . . .	44
2.4.4. Compute the STLI for Each Task . . . . .	45
2.4.5. Compute the CLI for the Job . . . . .	45
<b>3. EXAMPLE PROBLEMS . . . . .</b>	<b>48</b>
3.1. How to Use the Example Problems . . . . .	48
3.2. Jobs Performed a Few Times Per Shift . . . . .	53
3.2.1. Loading Punch Press Stock, Example 1 . . . . .	53
3.2.2. Loading Supply Rolls, Example 2 . . . . .	59
3.2.3. Loading Bags Into A Hopper, Example 3 . . . . .	65
3.3. Single Task, Performed Repetitively . . . . .	69
3.3.1. Package Inspection, Example 4 . . . . .	69
3.3.2. Dish-Washing Machine Unloading, Example 5 . . . . .	73
3.3.3. Product Packaging I, Example 6 . . . . .	79
3.4. Repetitive Multi-Task, Short-Duration . . . . .	84
3.4.1. Depalletizing Operation, Example 7 . . .	84
3.4.2. Handling Cans of Liquid, Example 8 . .	91
3.5. Repetitive Multi-Task, Long-Duration (> 2 hrs) . . . . .	99
