Brain & Other CNS	C70.0-C72.9			Only 4 cases in database without histologic confirmation. No need to review with Dx Confirm
ROADS codes 20-30 convert to FORDS 20		10	Copy	SEER interpretation of some codes results in a different FORDS code than COC conversion

Spleen	C42.2			Review codes 30-32 and 50-52 (if any) for correctness of original surgery code.
		30-32	00	No surg to LN from spleen primary--should have been coded in Scope of Regional LN
		50-52	90	LN dissection should have been coded in Scope of Reg LN; adjacent tissue should probably be coded in Surg Other Reg Dist Sites
Skin	C44.0-C44.9			SEER does not collect margin information
		40	45	
		50	45	
Bladder	C67.0-C67.9			SEER does not collect information on bladder reconstruction
		60	60	

Lung	C34.0-C34.9	SEER differs in handling conversion with Dx Confirmation available

		24	If Dx Confirm = 1, 4
		19	If Dx Confirm = 9
		13	13
14	14	COC conversion goes to 19	
Breast	C50.0-C50.9	SEER does take reconstruction into account. For algorithm, it is easier to say 0, 9 than "NOT 1-8"	
	Missing and invalid codes	90	Range of missing invalid values is different: 18-29, 31-39, 43-49, 53-59, 63-69, 73-79, 80-89 all go to 90
