## ***Changes to Historical China Estimates***

### **Explanation of November 2004 historical revisions to China's cotton stocks:**

China's historical supply-demand estimates are revised with a 1.6-million-bale increase to 2003/04 ending stocks this month. The government of China does not provide official estimates of ending stocks. USDA's revisions result from analysis which indicates that October's estimated stocks for July 31, 2004 of 6.243 million bales were insufficient to support domestic mill use and reserves until production from the 2004 crop became available in October 2004.

China supplemented domestic supplies by importing 493,000 and 269,000 bales during August and September 2004, respectively; these levels were well down from preceding months. At the same time, the government purchased about 400,000 bales for the State reserve, reducing available supplies. Assuming that a total of roughly 5.8 million bales was consumed by mills during August-September, stocks would have fallen to 800,000 at the end of September, the equivalent of about one week's mill use, based on the October estimate of 6.2 million for 2003/04 ending stocks.

USDA has raised the estimated 2003/04 ending stock level to 7.843 million bales by: (1) eliminating losses that were included in the China balance sheets in the early 1990's (adjustments totaling 1.2 million bales); and (2) reducing 2003/04 consumption by 400,000 bales to reflect a lower cotton fiber share. China's yarn production has risen significantly in recent months; however, tight end-of-season stocks make it likely that cotton lost share to manmade fibers.

China reformed its cotton procurement and distribution system in September 1999, undertaking to dispose of large surplus stocks accumulated in the late 1990's. Since that time, USDA has made historical stocks revisions three times, in April 2000, July 2002, and November 2004. USDA uses all available information to estimate China's stocks, including: (1) balance sheet results that include estimates of production, consumption, and trade; (2) stocks estimates provided by sources in China; and (3) estimates of free supplies and those held in reserve by the government.

For 2004/05, fiber share is expected to rise as cotton supplies become more plentiful—both higher fiber share and growing yarn output are generating higher estimated consumption of 36.0 million bales. Cotton imports are raised to support the higher consumption and to maintain the ending stocks-to-use ratio.
