Key

- ★ = Compound/product class sampled in the 2002 FSIS Import Monitoring Plan
- ☒ = Compound/product class pair of regulatory concern but not included in the plan because of lab resources
- ☒ = Since all product classes will be sampled by the CHC/COP method (see Section 7), and since this method also detects phenylbutazone, the latter, by default, will be sampled in all product classes. However, phenylbutazone is not of regulatory concern in all product classes. Those product classes in which phenylbutazone will be sampled, but where it is NOT of regulatory concern.

¹ Consistent with the domestic plan no samples for bob veal, no samples will be taken from New Zealand bob veal shipments for avermectins.

² There will be no sampling of processed products from countries that also ship fresh products to the United States or sources all their raw material from other foreign countries that are eligible to ship fresh product and are actively exporting to the United States.
